

Product Management Job Simulation

Program Overview & Participant Profile

Participant	Shashank Sharma
Program	Product Management Job Simulation (Forage)
Format	Free, self-paced virtual experience program
Completed	September 22, 2026 (Certificate of Completion)
Role simulated	Mobile gaming product management intern
Certificate signed by	Tom Brunskill, Co-Founder of Forage

About the Program

This is a free, self-paced virtual job simulation in which participants take on the role of a mobile gaming intern. The work mirrors what product teams at major gaming brands, such as Electronic Arts, do day to day: analyzing key performance indicators (KPIs) and presenting insights to leadership. It is a simulation of the work, not paid or employed experience.

What I Worked On

Task 1: Understanding Product Performance

- Reviewed product data for a mobile game and identified which KPIs describe how the product is doing.
- Interpreted trends to understand what the numbers say about players and product health.
- Turned raw performance data into findings that could inform product decisions.

Task 2: Planning a Stakeholder Presentation

- Planned how to present analysis to leaders and decision-makers.
- Structured the story around the audience: the key insight first, supported by the most relevant evidence.
- Prepared clear recommendations and framed them for a non-technical, senior audience.

Skills Practiced

Data & KPI analysis	Reading metrics and drawing conclusions
Product thinking	Connecting player behavior to product decisions
Stakeholder communication	Presenting insights to leadership

Structured storytelling	Organizing findings into a clear narrative
